

Bituthene[®] Mastic

One part, gun or trowel applied mastic for sealing Bituthene membrane terminations and details

Product Description

Bituthene[®]Mastic is a rubberised, asphalt-based mastic. It has excellent adhesion to structural concrete, masonry and wood. The VOC (Volatile Organic Compound) content is 200g / L.

Architectural and Industrial Maintenance Regulations limit the VOC content in products classified as Architectural Coatings. Refer to Technical Letters at www.gcpat.com for most current list of allowable limits. Bituthene Mastic is available in tubes or pails.

Application

Bituthene Mastic is designed to seal terminations, edges of patches and overlaps in detail areas. On vertical applications, the mastic must be applied to both the top and bottom terminations.

Product Advantages

- Excellent adhesion
- Seals terminations, edges of patches and overlaps in detail areas

Limitation

Bituthene Mastic is an integral part of the Bituthene waterproofing system. This mastic should not be applied where it will be covered with Bituthene waterproofing membrane, except as permitted as a temporary cutoff. It should not be used as a primary waterproofing material.

Application Procedures

Safety, Storage and Handling Information

Bituthene products must be handled properly. Vapours from solventbased primers and mastic are harmful and flammable. For these products, the best available information on safe handling, storage, personal protection, health and environmental considerations has been gathered. Carefully read detailed precaution statements on product labels and the Material Safety Data Sheets before use.

Application

Apply Bituthene Mastic either with a caulking gun or trowel. If applied with a caulking gun, level the bead with a trowel to about 0.125in. (3mm) thickness and 0.5in. (13mm) to 1in. (25mm) width. When applied as a temporary cutoff, trowel Bituthene Mastic to 0.060in. (1.5mm) thickness. Bituthene waterproofing membrane may be placed over the thin cut off the next day. On the bottom edge of vertical applications, Bituthene Mastic should be troweled upward. Use it liberally at membrane terminations.

Material usage requirements for Bituthene Mastic will vary widely from job to job. On large horizontal plaza areas with few protrusions, only about one quarter of a tube may be required per roll of membrane. A vertical application may require one half tube or more per roll of membrane. Applications involving other protrusions may require one or more tubes per roll.

Clean tools with mineral spirits at the end of each day. Mineral spirits is a combustible liquid and should be used only in accordance with the manufacturer’s safety recommendation. Do not use solvents to clean hands or skin.

Drawings are for illustration purposes only.

Please refer to GCP Applied Technologies for specific application details.

Supply

| BITUTHENE MASTIC | |
|------------------|--|
| Unit size | 4.5 L Pail |
| Weight | Gross weight 3kg / pail |
| Coverage | 100 linear ft/gal (8.1m / L) [1in. (25mm) wide troweling] |

Health and Safety

Refer to relevant Material Safety Data Sheets.

Quality Assurance

GCP Applied Technologies is certified to ISO 9002 by TUV SUD PSB Pte Ltd.
